

## Faculty Document 2007-11

### Criteria for Hiring of Teaching Assistants in the Department of Geology & Geophysics

All departmental graduate students and, in some cases, graduate students in other departments are eligible for consideration for departmental teaching assistantships provided that they 1) are in good academic standing, 2) have suitable background in the subject matter of the course for which they would serve as a teaching assistant, and 3) satisfy the department standards for English proficiency for TAs. Criteria that are used in selecting among qualified candidates are the following:

- \* commitments for support (guarantees)
- \* the particular needs of the department in terms of specific courses
- \* prior experience in teaching with evidence of success
- \* progress in the graduate program
- \* amount of previous support for graduate study
- \* satisfactory progress toward a degree in Geology or Geophysics

Criteria for students who do not have a degree in Geology:

- a. A graduate student with no geology courses must take G202 and G204 before becoming a TA for 100-level geology courses.
- b. A student who has taken a 100-level geology course but not the equivalent of Geology 202 and Geology 204, can TA a 100-level course during the first semester of graduate school at UW-Madison provide the student enrolls, concurrently, in any remaining required courses (Geology 202 and/or Geology 204, depending on what other geology courses the student has previously completed).
- c. In the case that a graduate student has not satisfied the requirements for completion of or concurrent registration in Geology 202 and 204 (or equivalent), she/he may be eligible to TA for a particular course in a given semester if the course instructor requests that graduate student as the TA for the course.

Additional subject matter background in specific areas of geology and geophysics is required for teaching assistants in most intermediate and advanced level courses. Graduate students with a

strong background in biological sciences, including evolutionary biology, may be considered for teaching assistantships in Geology 110, Evolution and Extinction, and in Geology 107, Life of the Past.

Temporary eligibility to serve as a teaching assistant can be approved by the graduate studies committee on a semester-by-semester basis in cases where a graduate student has completed some, but not all, of the courses in the approved sequence for subject matter background. In such cases, the teaching assistant would also be required to be concurrently enrolled in one or more of the remaining courses in the approved sequence.
