

1.) Dense Temporary Deployment - Nov. 1999 - June 2000

Relocated Earthquakes from Nov. 1999 to June 2000

Temporary network of seismometers deployed from November 1999 to June 2000.

The temporary deployment of 29 3-component seismometers along profiles perpendicular to the rift zone [Haslinger et al., 2001; Hansen et al., 2004], providing the potential to document spatial and temporal changes in seismic properties of the volcano.
