Service to Grant Funding Agencies (NSF, ESF and ACS)

- NSF Science, Engineering and Education for Sustainability Workshop:
Convened workshop on “Natural and Engineered Carbon Sequestration” (October 7-8, 2011), with co-conveners Brad Sageman (Northwestern University), Catherine Peters (Princeton University) and John Holbrook (Texas Christian University). The purpose of this workshop was to develop a strategic plan to help guide funding for the SEES program (Science, Engineering and Education for Sustainability). The workshop focused on two interrelated avenues of research relevant to the Earth’s natural and human-influenced carbon cycle and its role in climate change: (1) studies of the natural carbon cycle (so we can calibrate and predict levels of naturally sequestered CO₂ and potentially enhance these natural avenues of sequestration), and (2) studies of the engineered carbon cycle (mechanical carbon capture and sequestration as a means to mitigate further increases in *p*CO₂). In both cases, a foundation of knowledge about sedimentary systems and their carbon storage capacities is a high priority. The workshop assembled researchers working on these two distinctive aspects of the carbon cycle to help shape funding directions for the SEES program.
